Input(ADS): ID

Input(External): Template

Input(External): Date

Input(H): Reminder

(I)

Output(Postbox) Reminder + Envelope

## Description:

We have opted for a simple system. We have made the assumption that the user of the system will want to enter the guests into the system and have personalized invitations created.

These invites are tagged with a unique ID which means that when the responses are received they can easily be recorded back into the system.

The final output will be a guest list, a DJ request sheet and a catering sheet with the necessary details included on each.

We have Omitted any static data from the system (such as dress code, times and place) as these can be placed on the invitation template.

We have created a reminder system which will send reminders to the attending guests in the days prior to the party.

(Assumptions have also been made that the hotel has a strict No Smoking policy inside the building!)
